NIAM 2017 Week 3 (Aug. 14-20): Vaccines are not just for kids—Adults

FB Updates:

1. Adults: Vaccines aren’t just for kids! Being a grownup doesn’t automatically make you immune from vaccine-preventable diseases. Influenza can make you very sick, along with Hepatitis A, B, mumps, meningitis, pneumococcal disease and shingles. And, you can get Tdap and easily infect babies and children. Protect yourself and those around you—especially the most vulnerable among us – get vaccinated. Learn more at www.sdiz.org. #NIAM17

2. Adults need vaccines too; if you’re not up to date, you’re vulnerable to a number of serious diseases like flu, hepatitis and pneumococcal disease. These diseases can be serious, even deadly – but they can be prevented with vaccines. Learn more: www.sdiz.org. #NIAM17

3. Are you up-to-date on your vaccines? Talk to your doctor or other healthcare professional to make sure you get the vaccines you need. Learn more at www.sdiz.org. #NIAM17

4. Adults can get whooping cough and have no symptoms. They can inadvertently pass it to babies, who can suffer serious, sometimes even fatal, complications. Protect the most vulnerable ones around you; get Tdap vaccine. Learn more: www.sdiz.org #NIAM17
