

Subject: IMPORTANT Info for all SDIR Users

SDIR will be unavailable to users as of 5:00pm on Friday, February 20, 2009 to allow for new version release 9.7 to be installed. The system will be available for users on Saturday, February 21, 2009.

Release 9.7 contains the following changes:

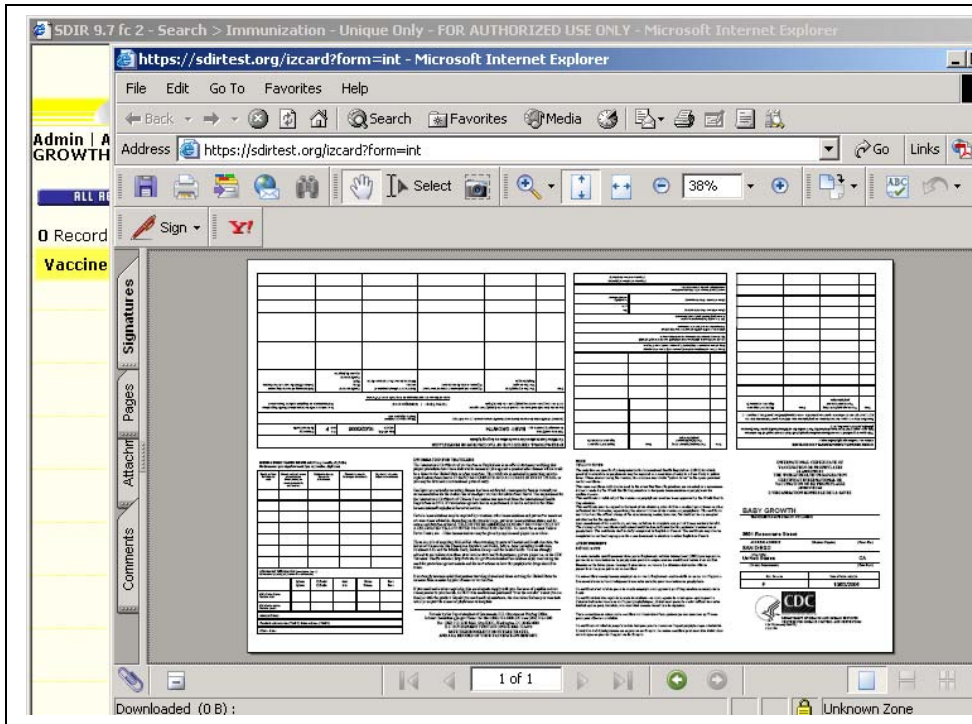

- A. Updated VFC order form and new location**—users can now get the most recent version of the VFC order form with Kinrix (DTaP/IPV) and Rotarix vaccines. The VFC order form is now found in the Admin Tab and under Inventory (and not in Reports Tab.)

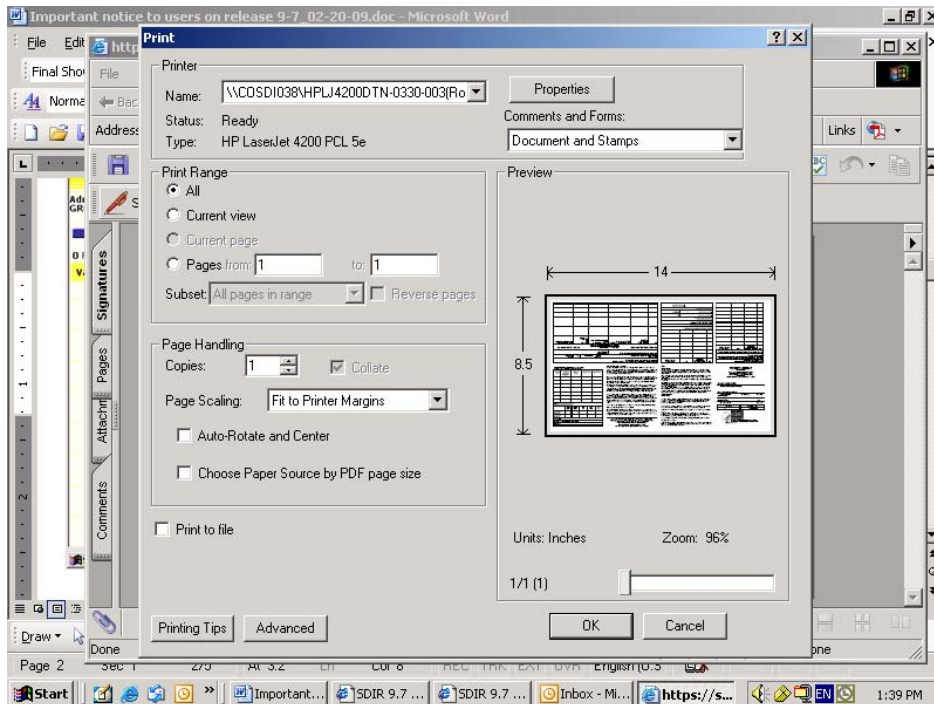

Vaccine for Children (VFC) Vaccine order Form (11/08)

- B. International Certificate of Vaccinations and Prophylaxis (ICV&P) -** Travel shot clinics will be able to print out the auto-filled certificate for travelers. Travel clinics that use the SDIR and who don't see the ICV&P below the Immunization screen, can contact the SDIR Help Desk for more information.

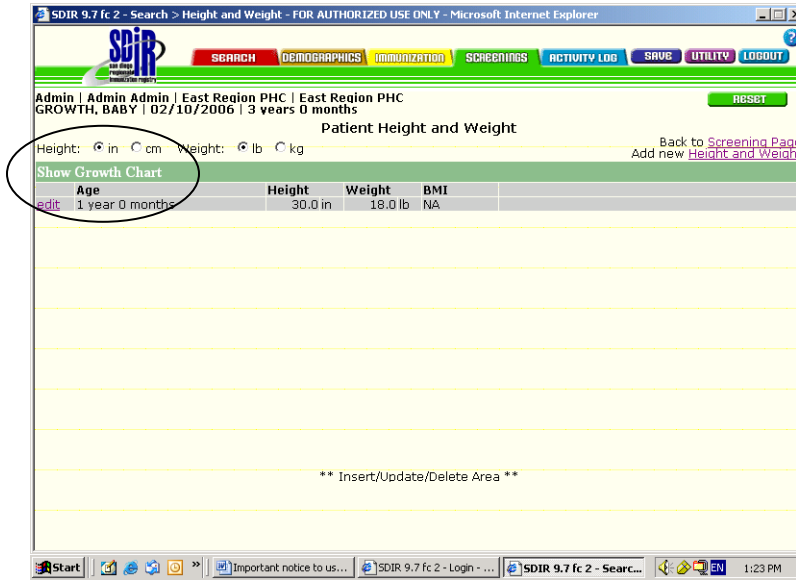

The ICV&P is a **legal** size document to be printed on yellow paper.

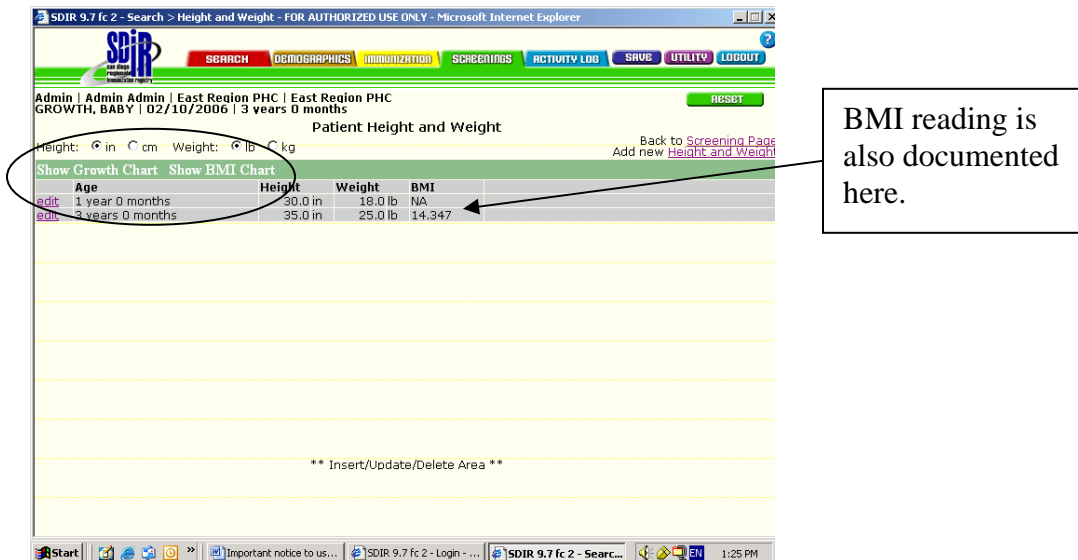

Be sure to set the Page Scaling to **Fit to Printer Margins**.
The printed document should be folded in half lengthwise; then folded in half and then folded in half once again. The final document should measure: approx. 3 1/4" x 4 1/4".

C. Growth and BMI charts – There are several new changes:

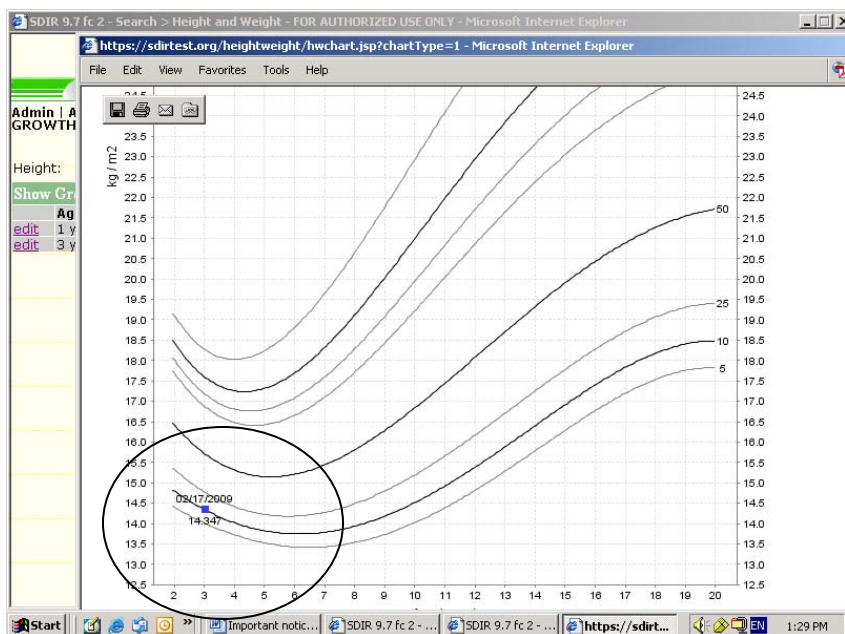

For children with height/weights taken under 2 years of age, “Show Growth Chart” will be displayed for the user to click on to see the chart.

For children who have had measurements taken after 2 years of age, both types of charts will be shown. Click on either “Show BMI Chart” to see the most recent chart or “Show Growth Chart” to see chart prior to 2 years of age.

Also, in response to user suggestion, is the addition of the actual BMI measurement on the bottom and the date of the measurement on the top of the point.

D. Inventory screen changes: Each column heading in the inventory screen can be sorted by clicking on the name of the column. Also, several vaccines –DTap-Hib-IPV, PCV7, MCV4 and HPV are now auto-linked to a specific manufacturer so the user will not have to pick the correct company when entering new inventory for these vaccines.

Click on any of the column titles to sort the vaccine inventory by that criteria.

Bug Fixes: The following fixes to “bugs” should be working:

- a. Missing Immunization, Missed Opportunities, and VFC Comparison reports are available to full users. (*Remember to run these reports either early in the morning or late in the afternoon so as not to slow down the system for all users!*) If you would like training on these reports, please contact your Registry Provider Liaison (RPL) or the SDIR Help Desk. Step-by-step instructions are soon-to-be-added to the online user training manual.

- b. School users will now be able to enter waivers/exemptions whether medical, philosophical, or religious.

Please let the Help Desk know if you think that these problems are still occurring or others with the vaccine forecast module are happening. We count on you to help us find these special circumstances.

We appreciate your feedback on these improvements and fixes. Please call the Help Desk at (619) 692-5656 (M-F 8am-5pm) if you have any questions about the release or experience any problems with these changes, or any other part of the SDIR. To consult the user training manual, please go to: http://www.immunization-sd.org/sdir/support_user-manual.html

Thank you!
SDIR Staff
